

This is the diagram we made in class for the soccer matches, the only things I would change in the diagram are some semantic relationships, like the composition between the Team and CoachingStaff and Player classes, an argument could be made that the players and CoachingStaff still exist if there's no team, which is more prominent when we had simple dependency of the Match to the teams, referees and Stadium to work, but the phrasing of the problem can lead to this ambiguity, besides that, I think that the diagram explains the dynamic of each match quite clearly, and every possible relationship between classes is taken into account.
